

Major Types of Climate in Europe

- Continental
- Oceanic
- Mediterranean

NORTHERN EUROPE

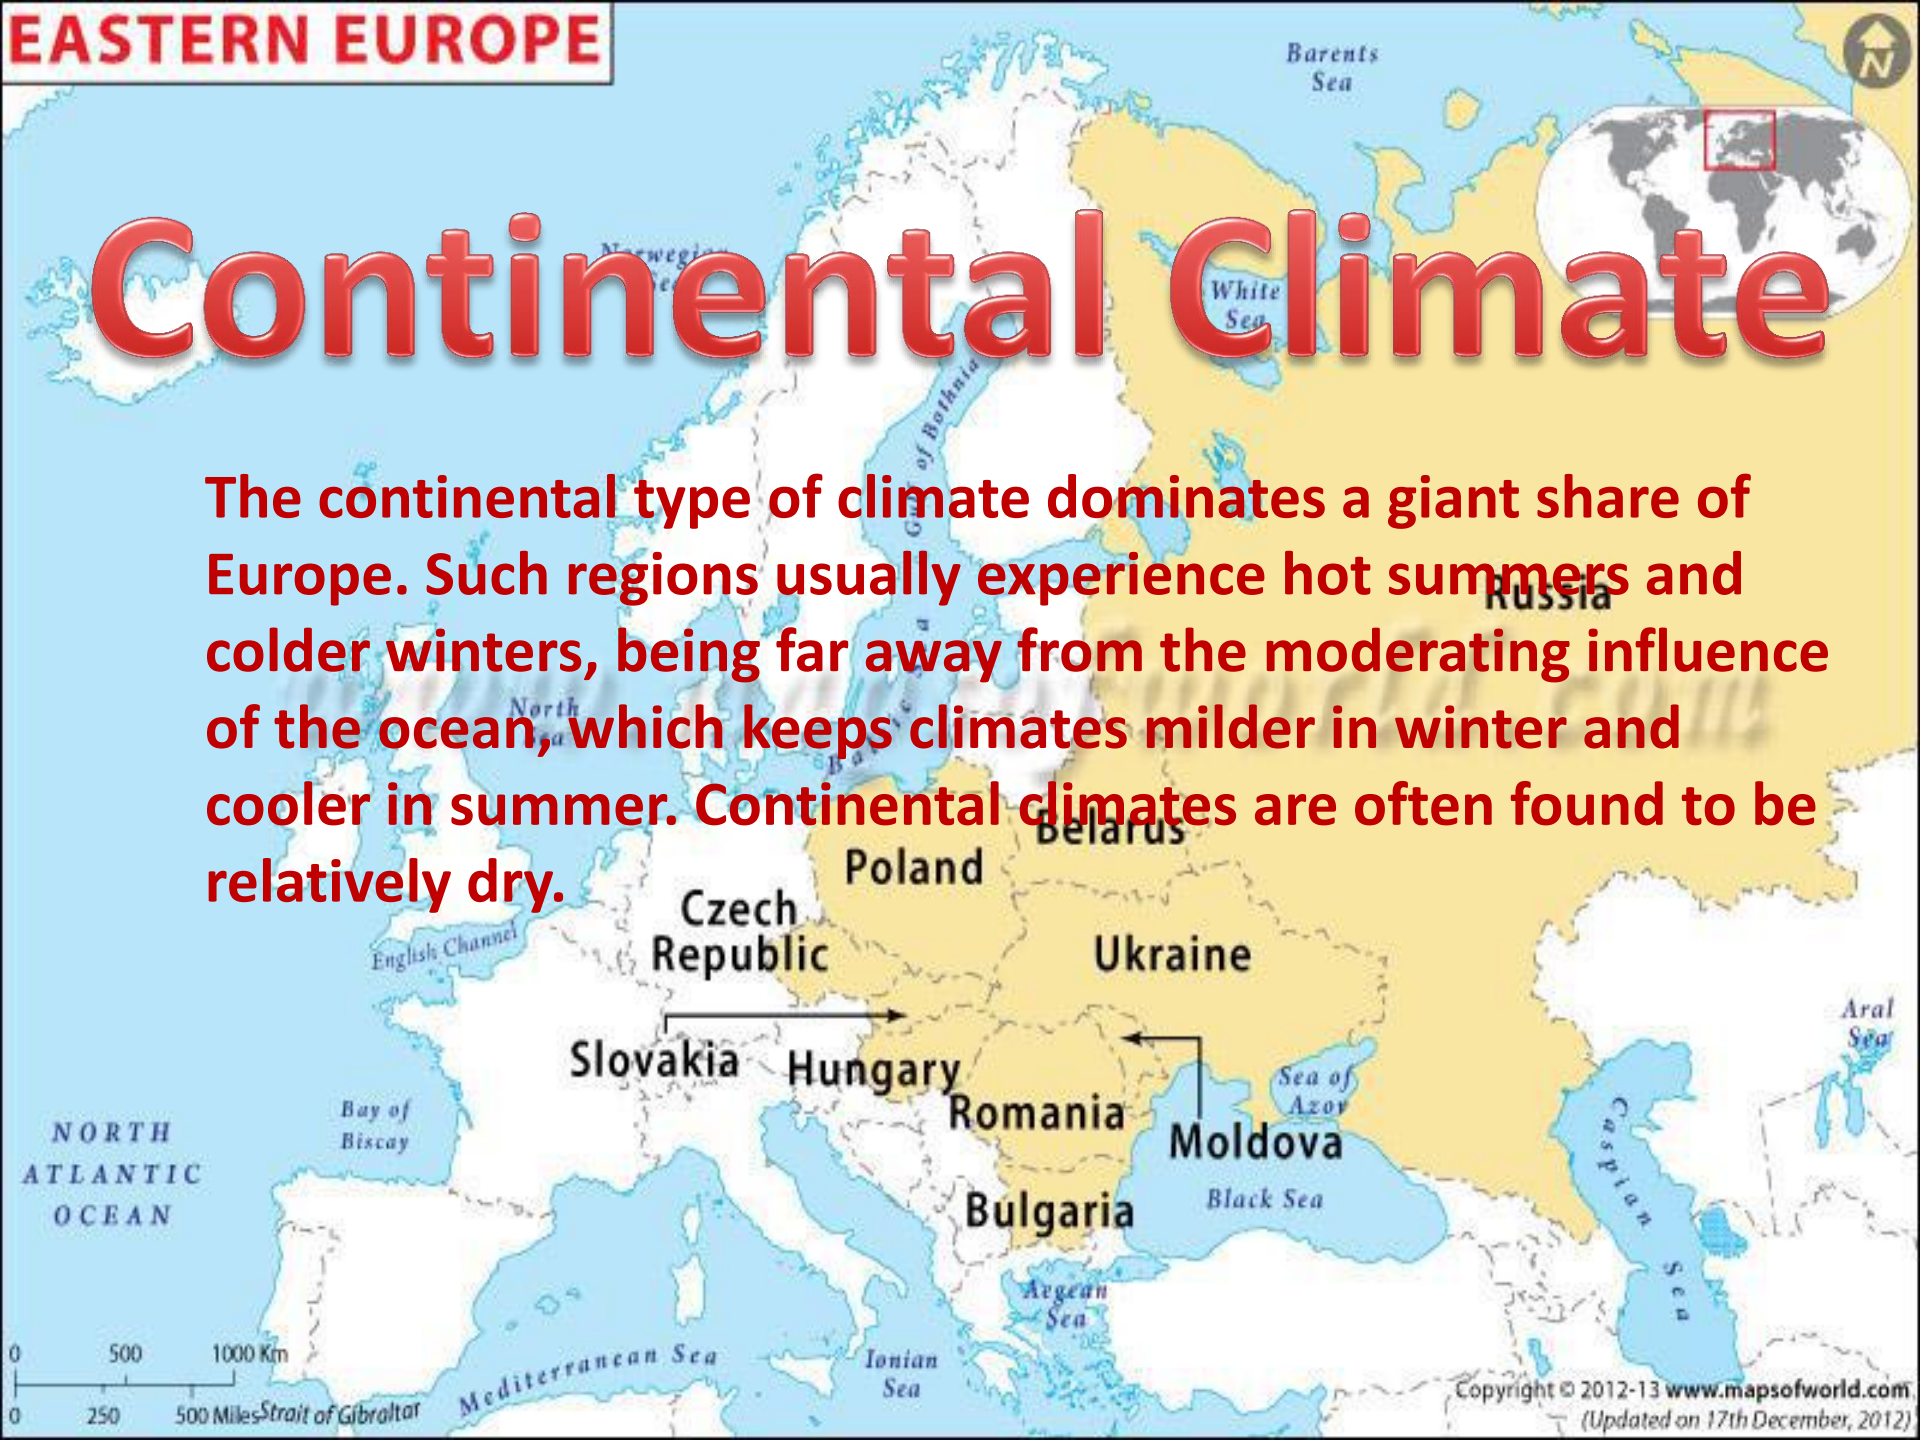

Oceanic climate

Summers are warm and winters are mild with a relatively narrow annual temperature range. It typically lacks a dry season, as precipitation is more evenly dispersed throughout the year.

Continental Climate

The continental type of climate dominates a giant share of Europe. Such regions usually experience hot summers and colder winters, being far away from the moderating influence of the ocean, which keeps climates milder in winter and cooler in summer. Continental climates are often found to be relatively dry.

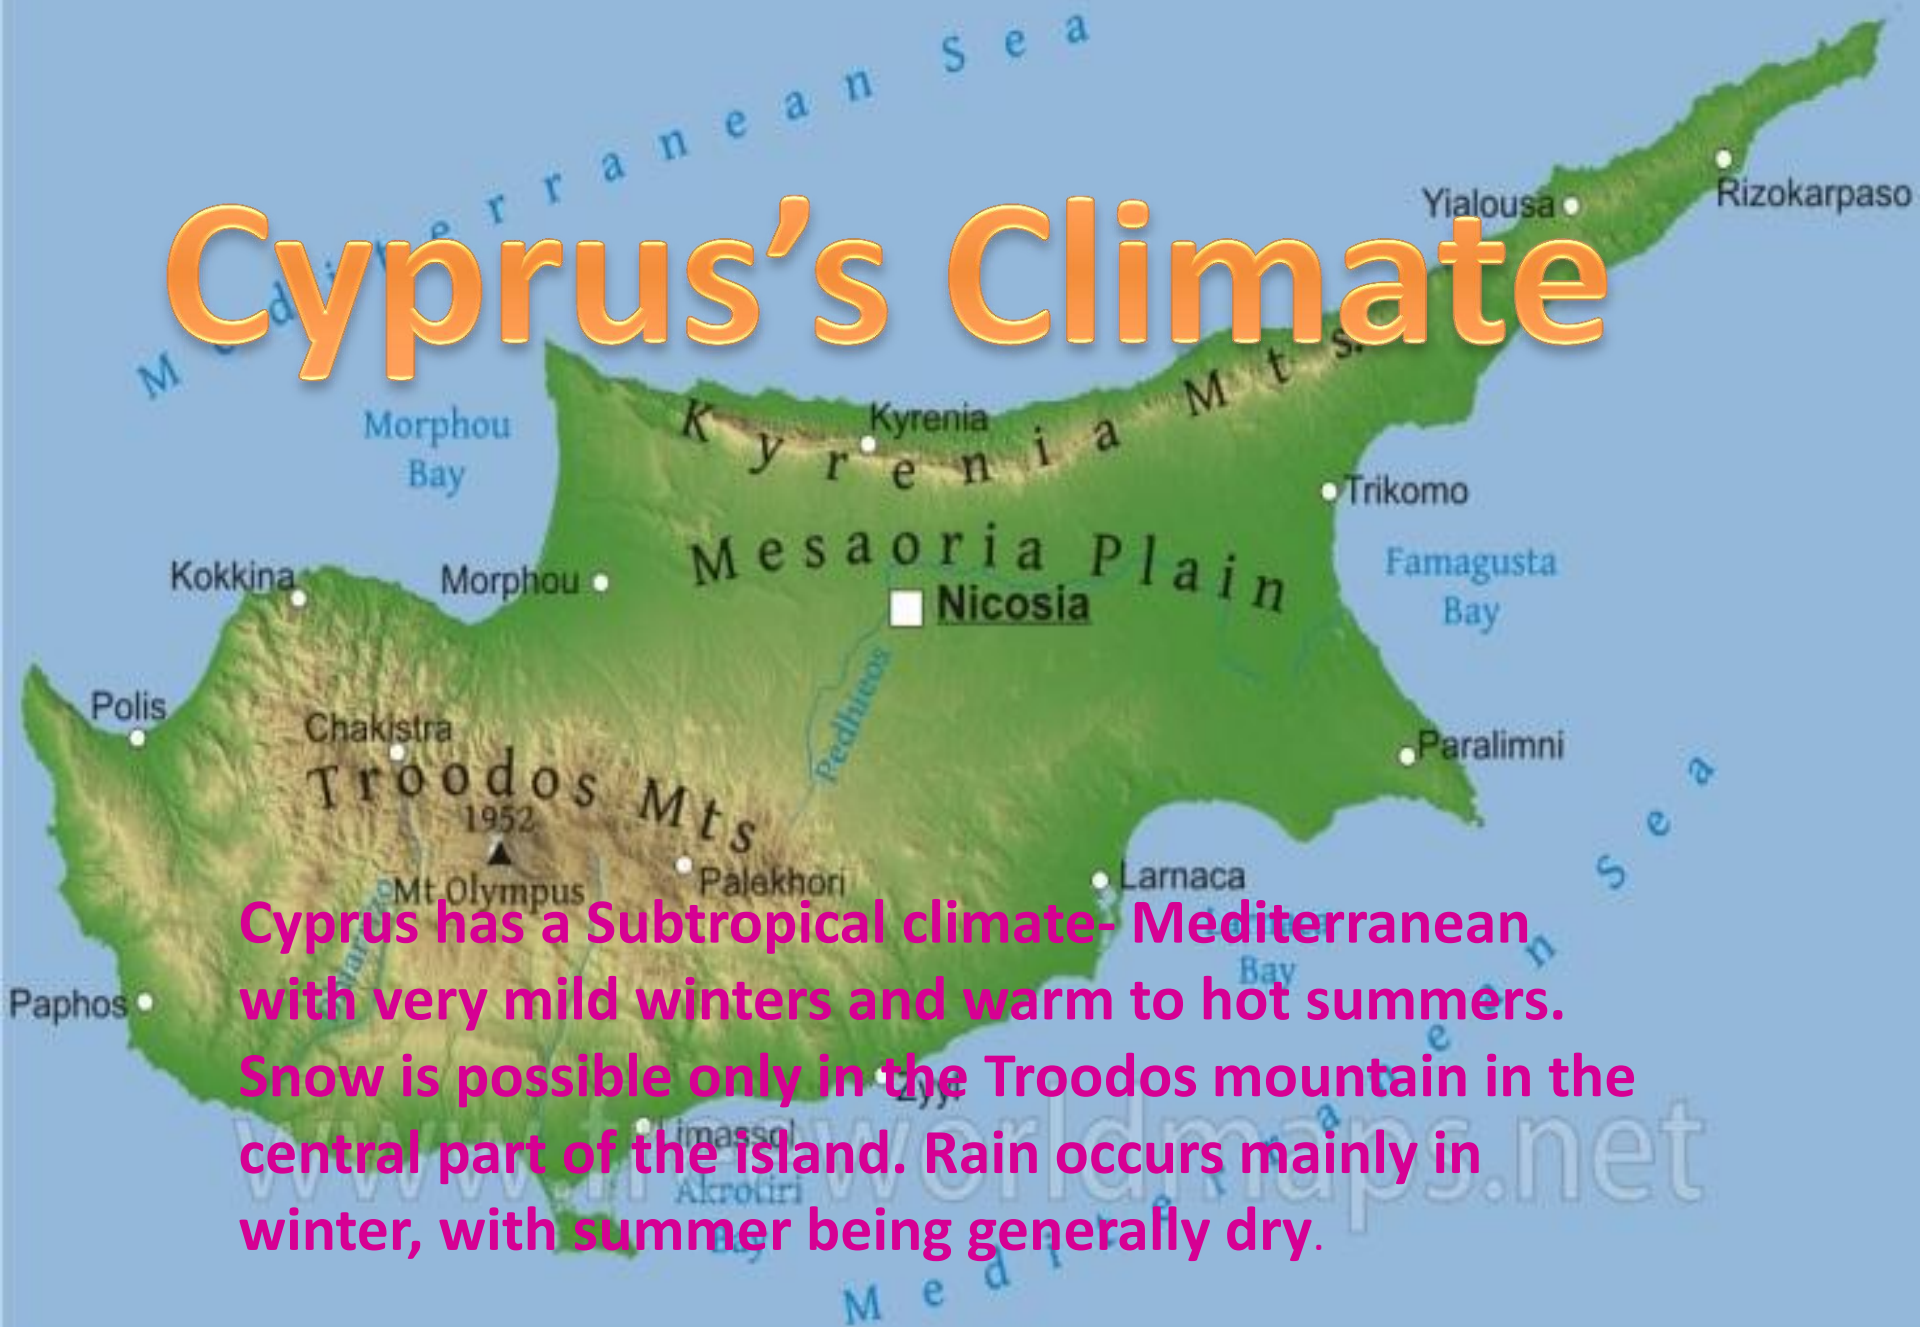

Mediterranean Climate

A map of Europe and the Mediterranean region. Countries along the Mediterranean coast are highlighted in orange, including France, Spain, Italy, Greece, Turkey, and Cyprus. Other countries shown in light green include Slovenia, Croatia, Montenegro, and Albania. The map shows the Mediterranean Sea, the Black Sea, and the Red Sea.

The subtropical Mediterranean Climate characterizes the coastlands of southern Europe. The main features of that climatic region are mild and wet winters, hot and dry summers, and clear skies for the longest period of the year.

Cyprus's Climate

Cyprus has a Subtropical climate- Mediterranean with very mild winters and warm to hot summers. Snow is possible only in the Troodos mountain in the central part of the island. Rain occurs mainly in winter, with summer being generally dry.

Annual Temperature in Cyprus

Period	Average Temperature /day	Average Temperature/night
April- November	21° C - 23° C	11° C - 13° C
December and March	19° C - 20° C	10° C - 11° C
January - February	17° C - 18° C	8° C - 9° C

Cyprus has the warmest climate and warmest winters in the Mediterranean part of the European Union. The average annual temperature on the coast is 24°C during the day and 14°C at night. Generally, summer season lasts about eight months. It begins in April and ends in November. In the remaining four months of the year, temperatures still sometimes exceed 20°C.

The middle of summer (July and August) is usually hot, with an average coastal temperature of around 33 ° C during the day and around 23 ° C at night. In the center of the island - the highlands - the average temperature exceeds 35 ° C while between June and September on the coast the average temperature is usually around 30 ° C during the day and around 20 ° C at night.

The Mediterranean climate is warm and rather dry, with rainfall mainly between November and March. In general, the island experiences mild wet winters and dry hot summers. Variations in temperature and rainfall are governed by altitude and, to a lesser extent, distance from the coast. Hot, dry summers from mid-May to mid-September and rainy, rather changeable winters from November and to mid-March are separated by short autumn and spring seasons.
